

Body Shaping: EasyLipoSM

**What is EasyLipoSM (the better Tumescent Liposuction)?
What conditions may be treated?**

EasyLipoSM, an enhanced Tumescent Liposuction technique under local anesthesia, uses powered liposuction with electrically assisted reciprocating fine cannulas to gently sculpt the body, followed by postoperative non-surgical.

VelaSmoothTM Laser to improve areas of excess fat with skin features of cellulite or early laxity. Most patients receive multiple sites of treatment in stages, often once a month. Correctable conditions include post-pregnancy abdomen, loose flanks, early saggy arms, and outer and inner thighs with cellulite.

Via multiple small punch incisions, under tumescent local anesthesia, delicate cannulas are used to extract the excess fat around the areas of the abdomen, flanks, thighs, and arms. With the reciprocating motion, patients often feel like they are getting an "internal massage."

Weeks after the powered liposuction is completed, **VelaSmoothTM** Laser technology of synergistic radio frequency, infrared laser, and vacuum is used weekly to further smooth the body contour, improve lymphatic drainage, reduce cellulite, and decrease circumferential dimensions.

The **non-surgical** VelaSmoothTM takes one hour.

When and What Results Might Be Expected? How long does the results last?

Both immediate and gradual modest improvement of body shape and skin tone are expected to last years to decades.

What is the recovery like? When can I return to work and activities?

Recovery for surgical liposuction under local anesthesia usually takes one weekend. Mild swelling and bruising are expected. Use of prescribed pain medicine is usually not necessary. Make-up can be applied immediately. Most patients return to work and regular activities within one week. Recovery for non-surgical LipoSmooth is minimal. Mild swelling and redness are expected.

Any treatments to help maintain or enhance my results?

Minor adjustments, maintenance, or further enhancements can often be done nonsurgically with LipoSmooth for cellulite, LipoSmooth MesoTherapy for residual fat, or **LipoTight** for lax skin. More extensive or permanent changes require further surgical shaping.

Significant changes require further surgical shaping.
