

Nourish Your Skin: MesoFacialSM

What is MesoFacialSM? What conditions may be treated?

Just as your body needs food, your skin needs nutrients to grow and build collagen. A groundbreaking new procedure, the MesoFacialSM, delivers the "food" your skin craves – minerals, vitamins, antioxidants, growth factors, hyaluronic acid, and amino acids – to look its most radiant.

The MesoFacialSM is gentle and relaxing, takes approximately one hour and can be given up to twice a week for a series of treatment.

Correctable conditions include skin pigmentation, tone, and dryness.

When and What Results Might Be Expected? How long does the results last?

Instant and dramatic improvement of skin radiance and hydration is expected.

Results generally last up to weeks with further treatments suggested for maintenance.

What is the recovery like? When can I return to work and activities?

Recovery is none. Instant glow and improved tone are the usual.

Minor adjustments, maintenance, or further enhancements can often be done non-surgically with further **MDSunTM Skin Care, Lasers/Fotofacial^{RF}** for additional enhancement. More extensive or permanent changes require further ablative options such **FraxelSM** or **FraxeLiteTM**.
