

Skin Brightening: Lasers, FotoFacial RF, MesoFoto RFSM

What are Lasers, FotoFacial RF, and MesoFotoRFSM? What conditions may be treated?

Lasers and **FotoFacial RF** use light energy or combined radio frequency and intense pulsed light to rejuvenate the skin.

MesoFotoRFSM, the enhanced version of **Fotofacial RF**, combines **FotoFacial RF** and **MesoFacial**, rejuvenate the skin in three synergistic ways: nutritionally, optically, and electrically. Series of MesoFacials are followed by multiple sessions of laser or IPL RF.

The skin is primed or prepared with medical skin program several weeks prior to light therapy. For few days up to one week prior to light treatment, no exfoliating agents should be used. During the laser or light session, topical numbing medicine and/or cooling are often used to enhance comfort. Rubber band like sensation is felt during laser or light activation.

With **Lasers** and **FotoFacial RF**, correctable conditions include dark spots, rosacea, veins, texture, acne, pores, and unwanted hair.

With **MesoFoto RF**, Correctable conditions include dark spots, rosacea, veins, texture, dullness, and dryness.

When and What Results Might Be Expected? How long does the results last?

With **Lasers** and **FotoFacial RF**, gradual and modest improvement of skin texture, color, or unwanted hair is expected.

With **MesoFoto RF**, instant and dramatic improvement of skin radiance and hydration is expected Subsequently, gradual and modest improvement of skin texture and color is expected.

Results generally last up to one year with further treatments suggested for maintenance.

What is the recovery like? When can I return to work and activities?

Recovery is minimal. Mild peeling, dryness, redness, or crusting are expected during the first few days. Anti-inflammatory, moisturizers, and sun-blocks are required during this period, but no exfoliating agents should be used.

Any treatments to help maintain or enhance my results?

Minor adjustments, maintenance, or further enhancements can often be done non-surgically with further **MDSun™ Skin Care, Lasers/Fotofacial RF** for additional enhancement. More extensive or permanent changes require further ablative options such **Fraxel** or **FraxeLite™**.
